

# Postman Collections

A collection which can be imported into Postman for testing the API is provided here.

**before portal release 3.29**

jrest.postman\_collection.json

**from portal release 3.29**

jREST API.postma...\_collection.json

# Importing Swagger to Postman

To import the Swagger to Postman, you can access the .json definition using the swagger UI.

Copy the definition, and save to a file.

Change the following at the top:

```
"swagger" : "2.0",  
  "info" : {  
    "version" : "1.0"  
  },
```

Change to:

```
"openapi" : "3.0.1",  
  "info" : {  
    "title" : "rest api docs",  
    "version" : "v1"  
  },
```

Now you should be able to import to postman.
