

Role DATA - Cleaner (CentOS8/Win2019)

Create Cleaner Job

The DB cleaner job is created on the master server, or the primary master server in a redundant installation.

The server performs the database cleaning daily and deletes all files, depending on the system settings, see [Database Cleaning](#).

Copy the following commands into the shell as **root**.

Note - since this command also uses the **.my.cnf** of the jtel user, the backup should be set up first.

```
cat << 'EOF' > /etc/cron.daily/db_cleaner.cron
#!/bin/bash
su - jtel -c 'bash /home/jtel/shared/JTELCarrierPortal/DB/mysql/cleaners/db_cleaner.sh'
EOF

chmod 750 /etc/cron.daily/db_cleaner.cron
chmod 750 /home/jtel/shared/JTELCarrierPortal/DB/mysql/cleaners/db_cleaner.sh
```
