

Role DATA - Create MySQL User for Customer Access (CentOS8/Win2019)

The following commands create a database user "customer" for read access and execute access. These commands should be executed on the master database, or one of them in the case of replication.

```
CREATE USER 'customer'@'%' IDENTIFIED WITH mysql_native_password BY 'secret';  
GRANT SELECT, CREATE TEMPORARY TABLES, CREATE ROUTINE, ALTER ROUTINE, EXECUTE ON JTELWeb.* TO 'customer'@'%';  
GRANT SELECT, CREATE TEMPORARY TABLES, CREATE ROUTINE, ALTER ROUTINE, EXECUTE ON JTELStats.* TO 'customer'@'%';  
GRANT SELECT, CREATE TEMPORARY TABLES, CREATE ROUTINE, ALTER ROUTINE, EXECUTE ON JTELStats2.* TO 'customer'@'%';  
GRANT SELECT, CREATE TEMPORARY TABLES, CREATE ROUTINE, ALTER ROUTINE, EXECUTE ON JTELLog.* TO 'customer'@'%';  
FLUSH PRIVILEGES;
```

We recommend that the customer access the slave database for most purposes.
