New Repository Locations

jtel has moved its repositories to a new location.

See further below for instructions on how to change the URL of a GIT repository.

Repository Locations

| Repository	New Location	Recommendation
8Server deploy	`https://bitbucket.org/jtelgmbh/8-server-deploy.git`	Set the new URL and continue as before.
JTEL	`https://bitbucket.org/jtelgmbh/jtel.git`	Set the new URL and continue as before.
JTELCarrierPortal	`https://bitbucket.org/jtelgmbh/jtelcarrierportal.git`	**It is possible to change to the new URL, and fix the failed merge problem (see below).** **However, we recommend cloning this URL completely into a new directory.** Cloing the new URL will also decrease the repository size considerably.
jtel-system-java-services	`https://bitbucket.org/jtelgmbh/jtel-system-java-services.git`	

Using the Command Line

Fetch all from the new repository and checkout the branch you require. This example uses stable-3.15.
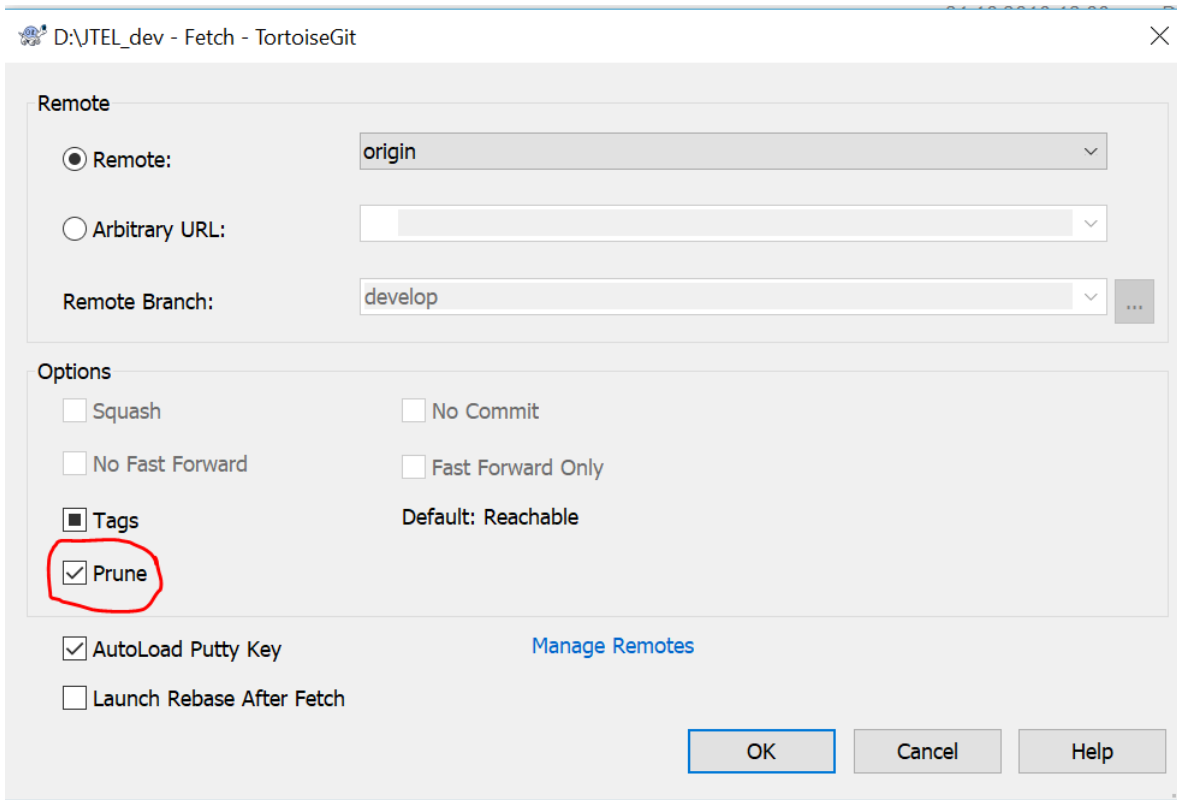

```
git remote set-url origin https://NEW_URL
git fetch --all --prune
git reset --hard origin/release/stable-3.15
```

Using Tortoise GIT

Alternatively, for Windows Repositories set the URL in Tortoise-GIT here:

Then **fetch** and prune:

Then **pull.**
