Swyx PBX - Connect to jtel System

Background

This guide describes one way of connecting the jtel ACD to the Swyx PBX system and routing calls to the jtel System.

The following principle applies to connecting the jtel System to the Swyx PBX:

- Incoming calls to the jtel System will be routed by SIP with RTP to the jtel ACD on Leg 1 by the PBX
- The jtel ACD will make outgoing calls to agents via SIP with RTP back down the same route back to the PBX on Leg 2
- For outbound, Leg 1 is to the agent first and Leg 2 to the destination.

The jtel System hence operates as a back to back user agent, the Swyx PBX is not aware that Leg 2 calls are associated with Leg 1.

Scenario

The following configuration scenario was performed after the following steps had been performed on the Swyx System:

- Install Swyx
- Get System up and running
- Configure and test internal users
- Check telephony between users
- Configure a trunk to the outside world
 - Check outgoing calls from users
- Configure routing to internal users from outside
 - Check incoming calls via the trunk to internal users

After these steps, a basic PBX is configured with some users, internal calls working, and functionality to call inbound or outbound to / from the outside world.

This is not intended to be an expert guide on configuring the Swyx PBX system or a recommendation that "this is the one and only way" of doing things.

You should know your Swyx PBX well, and any configuration therein which is relevant.

You should also be familiar with the procedures involved here, particularly in the Swyx PBX.

You should also be capable of identifying steps which may be critical to your PBX installation, it's configuration or any routing involved, before you proceed.

The scenario below may need modifying to suit your needs!

First step: Add Trunk Group for jtel ACD

Add new trunk group

Right mouse click

Go to next step

Add new Trunk Group

Х

Specify a trunk group name and a description

Add new Trunk Group				×
Trunk Group Name and Descrip Specify Trunk Group name and d	tion lescription.			$\tilde{\mathbf{x}}$
Enter a unique Trunk Group nam Group name or Phonebook entry	e, i.e. not used	otherwise as	Trunk name, U	lser name,
Enter the optional description that	t will later on he	lp you identif	ying this Trunk	Group.
Trunk Group Name:	TG test			_
Description:	TG test			
		Zurück	Weiter >	Abbrechen

Trunk Group Type

- It is important to specify the trunk group type:
 trunk Group type : SIP
 profile: <Customized SIP>

Add new Trunk Group	×
Trunk Group Type Specify the type of the Trunk Group and s	elect the appropriate profile.
Select the Type of Trunk Group to be add applicable profile from the second list. If yo for your installation, consult the SwyxWare If you want to add a Trunk Group for a nor Profile "Custom". This will allow enetering a	ed from the first list and choose the u are uncertain, which profile is applicable Administration documentation. n-listed SIP service provider, select the all required parameters in subsequent steps.
Trunk Group Type:	SIP
<u>P</u> rofile:	<customized sip=""></customized>
	< <u>Z</u> urück <u>W</u> eiter > Abbrechen

SIP Settings

• Disable sip registration and go to next step

Add new Trunk Group	×
SIP settings Please specify whether SIP registration is enabled for this Trunk Group.	Ś
The subsequently prompted information must have been supplied by your SIP s provider.	ervice
If your service provider requires a SIP registration (usual case), enable the chec and enter the registrar's name or IP address.	:kmark
The SIP account specific information must be entered when you add a Trunk to Trunk Group you are currently creating.	o the
Enable SIP registration Registrar:	<u> </u>
Re-registration Interval: 120 <u></u> seconds	
< <u>Z</u> urück <u>W</u> eiter >	Abbrechen

SIP Settings

- The proxy address is the IP Address of the jtel System telephony server
 Specify port 5060 as standard (unless this has been changed deliberately on the jtel System)
 For the realm specify the ip address
 DTMF Mode = RFC 2833 Event

Add new Trunk Group				×
SIP Settings Specify SIP settings fo	r this Trunk Group.			کې
The SIP Proxy is the se IP address must have	ervice provider's inter been provided.	face for call con	trol. Therefore its	s name or
The SIP realm is part of composition. The para passed to the provider	of the SIP addressing meter "DTMF Mode"	mechanism, i.e. ' determines how	it is used for SIF v a user's keypad	9 URI d input is

SIP URI

Set all fields empty

Add new Trunk			×
SIP URI Specify SIP URI			ૢૼૢ ૾ૺ
If this Trunk is su service provider) Trunk's propertie	pposed to handle non-nume you can enter one of these s.	ric SIP URIs (e.g. assigne bellow and add other URI	d by your SIP s later via the
SIP URIs have t	he following format:		
	sip: <name1>@<name2< td=""><td>></td><td></td></name2<></name1>	>	
with <name1> reflecting the user's name and <name2> the realm.</name2></name1>			
For convenient in address all users with the configur	nput ** can be used as wildo in the realm "company.com ed realm in the SIP propertie	ard so that *@company.c ". The realm field shown b s but may be overwritten o	om would elow is pre-filled case by case.
URI:	sip:	@	
		< <u>Z</u> urück <u>W</u> eiter	> Abbrechen

Codecs

Leave as default

Add new Trunk	×
Codecs Select the codecs to be used for data transmission.	දුදුමු
The selected codec preference and filter defines the type of compression for calls using this Trunk. Therefore the selected codec has an impact on the used bandwidth and the quality of the call.	
Codecs Preference and Filter Prefer Quality ✓	
< <u>Z</u> urück <u>W</u> eiter > Abbr	echen

Number of Channels

• Set number of simultaneous call to 4 (just for testing), or to the number of licensed channels (see your jtel ACD configuration - number of licensed SIP / RTP channels).

Add new Trunk	×
Number of Channels Select number of Channels to be used by this Trunk.	بَ کْنُ
The number of concurrent calls via a specific Trunk is usually limited by the Trunk physics, the available bandwidth or by a provider limitation. Furthermore the number of simultaneous calls can artificially be limited to reserve (eISDN) channels or bandwidth for other applications. Usually ISDN BRI interfaces would allow to make up to 2 simultaneous calls, while ISDN PRI interfaces allow up to 30 calls.	's e.g.
< <u>Z</u> urück <u>W</u> eiter >	Abbrechen

Computer Name

• set the name of the computer where you run swyx

Add new Trunk	×
Computer Name Define the computer name where the Trunk is hosted.	Ś
The Trunk may be hosted on another computer than the SwyxServer. In this ca computer name must be provided here, otherwise keep the proposed default.	ase, the
Please enter the computer name as it is given in the Windows Server's system properties.	
Computer Name: TEST-SWYX	
< <u>Z</u> urück Fertig stellen	Abbrechen

Trunk - Trunk Group Settings

- after creating the trunk, edit the trunk
 specify the calling party and called party numbers as "Canonical with plus" for both inbound and outbound calls

Trunk Group Selection

• Specify the Trunk Group for which the rule should be applied

Add new Trunk	×
Trunk Group Selection Assign the new Trunk to an existing Trunk Group or create a new Trunk G which the new Trunk will be assigned.	roup to
The chosen Trunk Group determines the type of Trunk (ISDN/Analogue/S SIP or ENUM Trunk, SwyxLink) and defines several common properties.	SIP Gateway,
Furthermore Trunk Group settings specify if a Trunk is considered for routin calls.	g outbound
Trunk Group: TG test8s2	·
Create new Trunk Group	
7 54 Water	Albert
< Zuruck Wetter >	Abbrechen

Routing

- Specify a destination number i.e. numbers which should be routed to this trunk
 Critical point: we need to specify a higher priority for the rule (e.g. 600) otherwise default routing rules in the PBX may apply.
 Here it is important, that you know your Swyx installation and how calls are routed.

Eigenschaften v	on 600			×
General Routin	9 Source	Timely Condition	ons	
−Usage <u>U</u> se this <u>D</u> estinati	Trunk Group on number o	for Calls to the I	ollowing +49198112233*

	ОК	Abbrechen	Ü <u>b</u> ernehmen	Hilfe

Fourth Step: Create a trunk group in the jtel System

Trunk Group

- critical point: Swyx listens for incoming request on port 65002
 create a trunk group with the following configuration :

jtel PORTAL TEST2

◄ Edit Trunk Group "Swyx"

Master Data Trunks	
D :	6
Name :	Swyx
ncoming Number Pattern :	
SIP Source Server :	10.42.15.2:65002
SIP Destination Server :	
SIP Invited Entity :	
Subscriber	
Country Code :	49 (Germany)
Area Code :	198
Subscriber Prefix :	112233
	International, national and subscriber numbers are determined using these settings.
Outgoing Trunk Selection	
Frunk Group for Internal Numbers :	(Same Group)
Frunk Group for External Numbers :	(Same Group)
General access for outbound calls :	
Number translator	
ncoming Caller :	E.164 with + incoming
ncoming Called :	E.164 with + incoming

	Incoming numbers must be converted from the representation used by the signalling protocol on this trunk group to the E.164 format as used by all numbers in the portal.
Outgoing Caller :	VOIP - Add prefix "sip:+", then E.164 number and postfix "@ <converter parameter="">"</converter>
Converter Parameter :	10.42.13.82
Outgoing Called :	VOIP - Add prefix "sip:+", then E.164 number and postfix "@ <converter parameter="">"</converter>
Converter Parameter :	10.42.15.2:65002
	Outgoing numbers must be converted from E.164 used by the portal to the format required by the signalling protocol used by this trunk group.
Outgoing send P-Asserted-Identity :	
Loopback Prevention :	
	When the system makes an outgoing call to an agent, SIP history information (SIP history header) is provided if this is setup in the ACD group. If the history information is subsequently detected on an incoming call, then a loop has been produced (by call diversion) in the PBX. The system will reject such calls if this flag is set.
Outside Line Prefix :	
Outside Line Prefix : Internal Number Length :	

Trunk

- Assign the trunk for the relevant machine ID to this trunk.
 If it does not exist, create it first.

📃 jtel PORTAL TEST2			sysadmin Change Logout 🕜 🏫 DE EN
Per Trunks			
Filter : X New	One Record. Showing 1 Record from 1 to 1. Page 1 of	One Record. Showing 1 Record from 1 to 1. Page 1 of 1. 🦆 🛊 🏞	
MachineID	Controller	Name *	Action
82	1	test8s2	Delete

For debugging purposes

The usual call logging applies from the jtel side. It may be necessary to run a wireshark trace to see if calls are being routed to the jtel system at all.

You can access the swyx trace logs via: C:\ProgramData\Swyx\Traces on the Swyx machine which may give insight as to why things are not working.
