

CentOS 8 - Basic Installation as VM with .ISO Image (CentOS8/Win2019)

The following steps describe the basic installation process.

ISO File

The ISO File for the basic installation can be downloaded here: ARCHIVED https://cdn.jtel.de/downloads/ISOs/CentOS-8.1.1911-x86_64-boot.iso

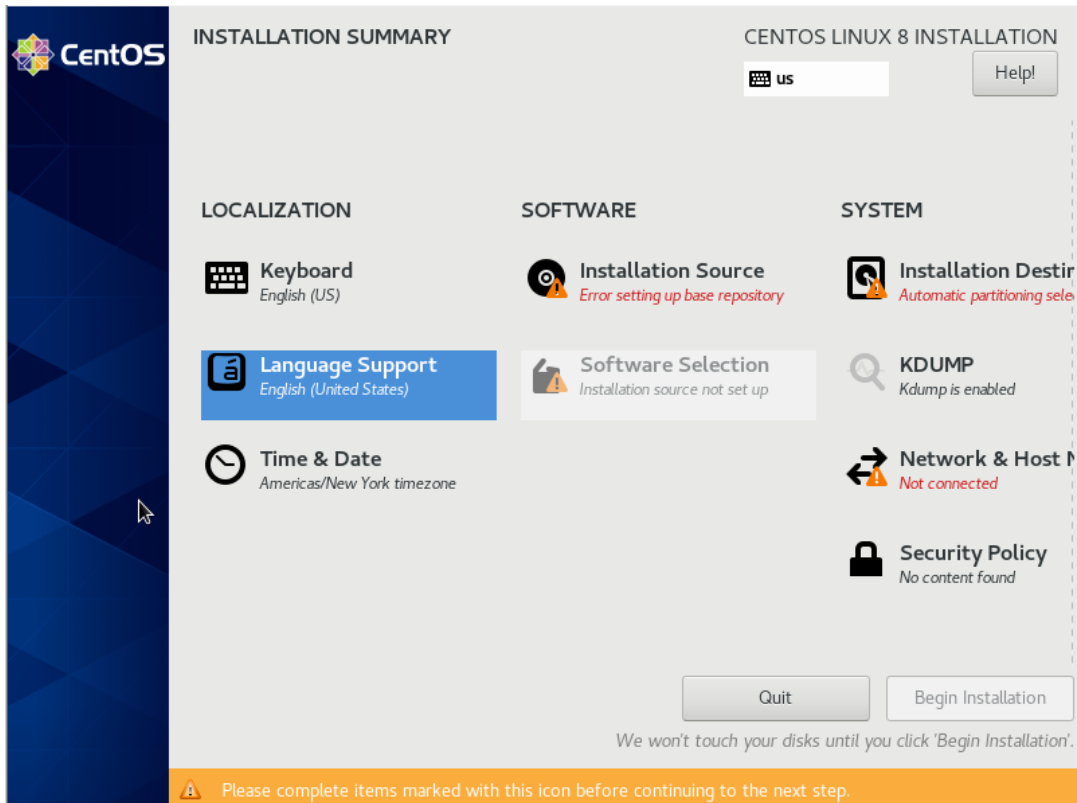

Select the first option (Install CentOS Linux 8).

On the next screen, select Continue.

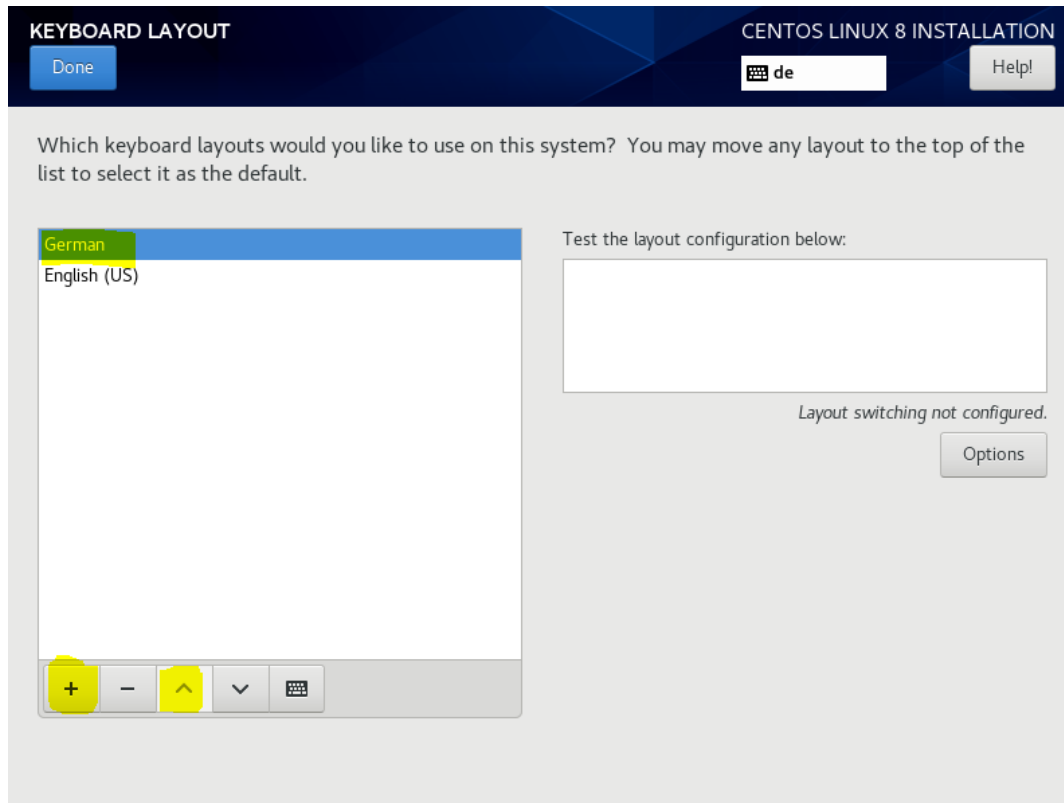

On the next screen, several items must be configured.

Setup the keyboard layout.

Include the most used keyboard layout first.

Setup the date and time. For example, to Europe / Berlin.

 You need to set up networking first if you want to use NTP

Connect to the network and setup the hostname

This example shows a DHCP connection. You may need to configure this manually, if you are not using DHCP.

Note: if you are using DHCP, a **reservation** is recommended.

Once you have connected to the network, you could use **ping** from another machine to verify that the machine is in fact connected to the network.

Choose the Installation Destination

Usually, you will not need to configure anything special here.

Help!

The root account is used for administering the system. Enter a password for the root user.

Root Password:

Weak

Confirm:

 The password fails the dictionary check - it is based on a dictionary word You will have to press **Done** twice to confirm it.

Reboot and check if everything is OK

After basic installation, you should be able to ssh into the machine using root and the password you set.

If the customer is installing the OS, this is the point at which the machines should be handed over to the project manager.

Do not install any further packages. You may do this once the jtel installation is completed - AT YOUR OWN RISK.
