

FTP-Logs

Choose **Logging - FTP Logs** in the main menu to view a list of FTP sessions which have been processed by the current client account.

This can be a result of:

- Uploading call recordings via FTP
- Uploading Lists from the IVR via FTP
- And any other configured function in the portal which sends files via FTP.

The table contains the following data:

Date /Time	The date and time of the FTP session.
Server	The destination server.
User	The user account.
Result	The session result.
Action	Edit the FTP session data.

If you click on **Edit** in the **Action** column, the FTP session log details are shown. The table contains the following data:

ID	The sequential number of the log entry.
Date / Time	The time at which this entry was created.
Server	The destination server.
User	The user account.
Result	The session result.
Trace	The trace related to the log message entry.
