

Install MiniClient Version >= 2.27

Requirements

- Visual C++* Redistributable für Visual Studio 2015
- Visual C++* Redistributable Packages for Visual Studio 2013

See also: [Download Mini-Client](#).

Windows Version

Support for the MiniClient is available for the following Windows versions:

- Windows 10
- Windows 11

The client is available in 64 and 32-bit versions.

Download Client

- See [Download Mini-Client](#)

Provision Files

- Unpack the files to the desktop.

Distribution of the Mini Client using a network folder is not advised. If problems occur, please test if a locally installed instance of the mini client will solve any issues.

Configure Portal URL

- In the **conf** folder open the file **ACDMiniClient.xml** with an editor.
- The setting **BasePortalURL** must be configured to the fqdn of the webserver or load balancer. An IP-Adress can also be used. See screenshot:

```
1 <?xml version="1.0" encoding="utf-8"?>
2 <configuration>
3
4     <!-- Portal Access URL -->
5     <param>
6         <value name="BasePortalURL" type="String">https://test10.jtel.de/CarrierPortal/mclogin/jtel/jtel/</value>
7     </param>
8
```

A brief explanation of the URL

http://**IP-Adress**/mclogin/**resellerUID**/clientsUID/

These settings can be obtained from your login data for the portal.

- The mini client can now be started.

See [MiniClient Settings](#) for other available settings.

Updating After Version 2.27

Quick Guide

- Download the client, see [Download Mini-Client](#).
- Unpack and place on the desktop. If a network folder is used for central distribution, copy the files to this folder.
- Start MiniClient.exe
- Import the old configuration (right mouse click on the title bar and select "Import ACDMiniClient.config". Select the old configuration file.
- Restart the client
