

Embedding in 3rd Party Applications

It is possible to embed the Mini Client in third party applications, as for example ESTOS ProCall or Starface UCC as a tab. To achieve this do as follows:

1. As an URL you choose the login URL to access the mini client directly via the web. Check the option **Stay Logged In** to store a cookie in the browser, another login will only be necessary after 365 days (system parameter).
2. If the Client doesn't update automatically you will need to add some values to the Windows Registry. This is due to the fact that most applications use Internet Explorer as an embedded browser control, which using the usually applied restrictive settings cannot receive updates. For the settings for ESTOS ProCall as well as Starface UCC client, see below.

Changing the registry

Consult your system administrator before making changes to the system registry. jtel is not liable for any malfunction which results from any modifications made to the registry. These settings are recommendations, which were created using the information available at the time of creation. jtel does not provide any warranty whatsoever that these settings are current or correct. Contact the vendor of your third-party software before using these settings.
