

# Create a routing application

Proceed as follows:

1. Choose **Routing - Routing Applications** in the menu. You will see a list of the routing applications present in the system.
2. Choose **New** in the toolbar to create a new routing application.
3. In the following for enter a nae for the application (for example *IVR example*), choose *Network IVR* as type, and give a name to the first application version, for example *Version 1*.
4. Check the option *Set Active*.
5. After entry click on **Save**.

After saving your configuration, you will be shown the Version-Control screen. Here, you can see all the changes that have been made, as well as switching the Versions from Not being active, into "Test" or "Active"
