

End Call Actions

Function

This module denotes the start of the workflow when the caller or system has hungup. For example, this can be used to send an email or to send recorded audio.

Program execution continues with the next connected object, if no object is connected then processing stops.

The following objects can be used in End Call Actions. If another type of object is encountered, then the system will immediately stop processing.

- Save Recording(s)
- Email
- http Request
- List Operations
- List Lookup
- Loop
- Number Suppressed
- SMS
- Declare Variable
- Comparison
