

Restricted Numbers

Choose **Number Management - Restricted Numbers** in the main menu, to view the table of restricted numbers.

Use **New** in the toolbar to create new numbers, which cannot be dialled from the system. Partial numbers, such as 49900 are allowed.

In the column **Action** you can **Edit** or **Delete** restricted numbers, assuming you have rights to use those functions.

A restricted number can be used as part of regular expression, that will be used in the following context '^<regex>.*' .

Ex: By using a restricted number '.*666', all numbers, which contain 666, will be rejected.

Note, that some numbers may be restricted by settings made by the system administrator. These numbers cannot be changed.
