

Branch Percentage

Function

This function is used to create a percentage distribution within the call flow.

Example: Connect three destinations (outputs Destination 1 ... 3). Parameterise the object to route calls (sum 100%) to 50% Destination 1, 25% to Destinations 2 and 3.

Parameters

Object Name	The name of this object instance
Part 1 ... 10	The percentage values for the connected object outputs

Outputs

Output	Used when ...
Destination 1 ... 10	when the closest possible set of values to the set values would be attained by using that output.
