

SMTP

Choose **Messaging - SMTP** in the main menu, to view the table of emails. These are emails, the system has sent, or attempted to send. You can, for example, correct the email address here.

Status	The current status of the message Already sent messages have the status <i>Archive</i> . Those which are being sent, have the status <i>Transport</i> .
Date / Time	The date and time the email was created.
Sent	The date and time the email was sent.
Sender	The sender of the message If this field is empty, the system will use the standard sender as defined in the client master data.
Recipient	The receiver of the message More than one addresses are separated by commas.
Subject	The subject of the message.
Error	If an SMTP delivery error was detected, it will be noted here. Note, that not all SMTP errors can be detected at the time of sending. If, for example, an email address is basically correct, but contains a typo, this cannot be detected when the message is sent.

In the column **Action** you can edit, delete, resend or download the first attachment of the mail. The function **Resend** can be used, after you have corrected an incorrect email address.
