

Parameters

General

Parameters govern how certain aspects of the system work as a whole. Most parameters are set globally, and cannot be overridden. Some parameters can be overridden by using the appropriate setting in a client or reseller account.

Editing

Parameters can be edited using the **System Settings ... Parameters** menu, by accessing the Edit function.

Field	Description
Name	The name of the parameter. Most parameters are named using a "Dot" convention (like domain names).
Value	The current value of the parameter.
Standard Value	The standard value of the parameter, provided as an example.
Role	Under Role, you can see which role the change applies to. If it says system, it is a setting that applies system-wide.
Description	A description of what the parameter affects.
Action	Under the Action button, the parameter can be edited

Restart Components

Some parameters require that the relevant components are restarted, or will be reloaded after a particular interval.
