Working with the Routing Editor

If you choose **Edit** in the list of versions of a routing application, the graphical editor is shown.

Note: This is only possible for applications which can be edited.

You have already used the graphical editor whilst working through the programming examples.

The available objects are discussed in the Object Reference.

The following commands are available in the editor:

Cut, **Copy**, **Paste**, **Delete** - applicable to the selected objects

Zoom In, **Zoom Out**, **Actual Size**, **Fit** - modify the view size on the workspace

Save, **Close** - every save operation creates a new version. With close, you can leave the workspace without saving.

In the top right hand corner you can see a navigator, which you can shift to display a different part of the workspace.
