Data Change-Log

Choose **Logging - Data Change Log** in the main menu to view changes users have made to data in the system. The amount of data you will see here depends on your role in the system. The maximum time for which data change logs are kept by the system is dependent on the system configuration.

If you click on **Details** in the **Action** column, the old and new values of the changes can be seen.

Date / Time	The date and time the change was performed.
Reseller	The associated reseller account.
Client	The associated client account.
User	The user, who made the change.
Impersonated	The identity, that user was using (impersonating) when the change was made
Change Type	The type of change made: Create, Update or Delete
Bean	The technical name of the object in which the change was made. This information is useful for technical support purposes.
Procedure	The technical name of the database routine which was used. This information is useful for technical support purposes.
