

List Functions

Function

This object carries an operation out on a [List](#).

Parameters

Object Name	The name of this object instance
List	Choose a list to operate on.
Function	<div>Select one of the following operations:</div> <div><i>Get First Value from List and Delete it</i> deletes the first entry from the list. <i>\$listvalue</i> is filled with the Value 1 field of the entry, or is empty if no entry was found.</div> <div><i>Remove Value from List</i> Removes a value from the list (searched for by key value). <i>\$listkey</i> is filled with the found key value or empty if the value could not be found.</div> <div><i>Add Value to List</i> Adds a new entry to a list.</div>

Depending on the function, further parameters are required:

Key Column	For the function <i>Remove Value from List</i> . The column, which should be used as the key column, to find the value in the list.
Key Value	For the function <i>Add Value to List</i> . The values for the fields of the new value to be added.
Value 1 ... 4	For the function <i>Add Value to List</i> . The values for the fields of the new value to be added.

Outputs

Output	Used when ...
Continue	Always
